

Dyson purifiers automatically sense and capture dust, allergens, and gases<sup>1</sup>  
 HEPA filters remove 99.97% of particles as small as 0.3 microns

## dyson purifier hot+cool formaldehyde

Purifies
Heats
Cools you

Captures dust, allergens and the H1N1 influenza virus.<sup>2</sup>  
 Detects and destroys formaldehyde, continuously.<sup>3</sup>

### Detects and destroys formaldehyde<sup>3</sup>

Solid-state sensor precisely detects formaldehyde and our catalytic filter destroys it, continuously.<sup>3</sup>

### Fully sealed to HEPA H13 standard<sup>4</sup>

Fully-sealed airflow and filtration system – captures 99.97% of allergens and pollutants as small as 0.3 microns. So what goes inside, stays inside.

### Activated carbon filtration

Removes odours and gases<sup>5</sup>, including benzene, VOCs and NO<sub>2</sub>.

### Air Multiplier™ technology

Delivers over 290 litres per second of smooth, yet powerful airflow – circulating powerful air to purify a 2860ft<sup>3</sup> space.<sup>5</sup>

### Intelligent sensing and reporting

In Auto mode, it automatically reacts to air pollution, increasing airflow when it needs to. Control and monitor real-time air quality on the LCD display or from anywhere using the Dyson Link app.<sup>6</sup>

### Draft-free backward airflow mode

Diverts airflow through the back of the machine. To purify the room, without feeling the airflow or cooling you.

### Night mode

Perfect for peaceful working environments or hotel rooms. Monitors and purifies using the quietest settings, with a dimmed display.

### Easy filter maintenance

Changing the HEPA+ Carbon filter is quick and easy, with automatic notifications for each machine on the LCD screen and Dyson Link app.<sup>6</sup> The catalytic filter never needs replacing.

1. Gas capture rates vary. 2. We challenged our purifier with airborne influenza A (H1N1 virus) at an independent lab. After 60 minutes in a chamber, at maximum fan speed, the airborne virus was reduced by 99%. Real-life efficacy may vary. Gas capture rates may vary. 3. Third party full machine testing based on GB/T 18801-2015 formaldehyde cumulative clean mass testing with continuous injection until plateau of formaldehyde CADR is achieved. Results may vary in practice. 4. Particle challenge by DEHS oil specified in EN1822 within a chamber specified in ASTM F3150. Tested in Max Mode at IIR US, for whole machine efficiency above 99.95%. 5. In maximum setting. Tested for air projection (DTM801), purification coverage in a 2860ft<sup>3</sup> room (TM-003711), and heating performance in a 1236ft<sup>3</sup> room (DTM961). Capture rates vary. 6. Requires device to run app, Wi-Fi or mobile data, Bluetooth 4.0 support, and iOS version 10 or Android version 5 (or above). Standard data and messaging rates may apply.
